

Integrated real-time/ batch eligibility verification solution for Raintree users

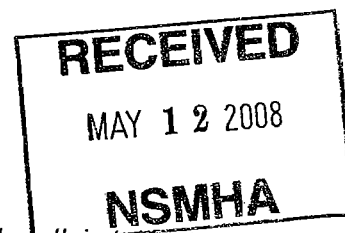

Why check patient eligibility?

Checking patient eligibility and benefits at point of care can reduce claim denials by as much as 50%; yet according to Healthcare Financial Management Association (HFMA), eligibility verification remains one of the most neglected areas of revenue cycle management. Average Clinic loses 5% of the revenue they are entitled to due to avoidable insurance claim denials. Furthermore, it takes 3 times the effort to rework on the denied claims.

pVerify offers industry's most innovative, all-payer eligibility solution that makes it easy and affordable for you to perform eligibility consistently. Our real-time payer list currently has over 300 payers (Medicare, Medicaid, BCBS and Commercial) across all 50 states. Following are the key benefits of pVerify:

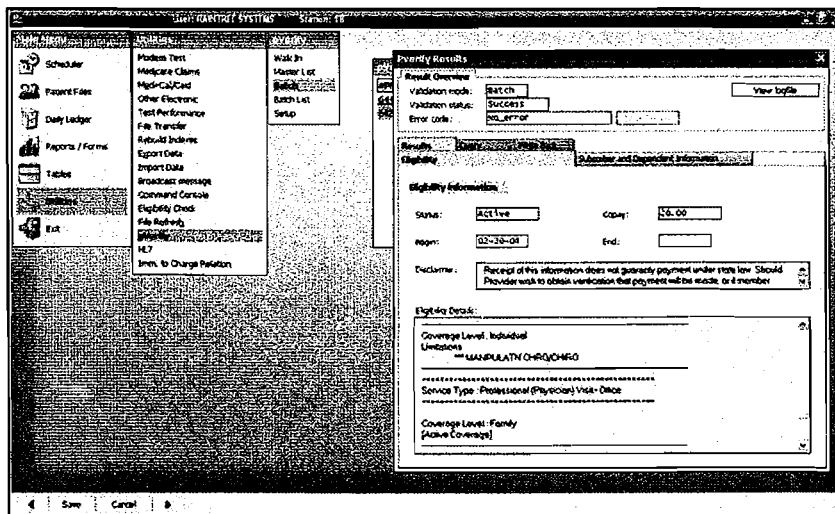

- ❖ Increase cash-flow and reduce days in A/R
- ❖ Drastically reduce Insurance Claims Denials
- ❖ Increase employee productivity

As a Raintree user, why should you choose pVerify?

pVerify is fully integrated with Raintree for both, initiating the eligibility request (*individual, walk-in type or batch based on appointment scheduler*) and for review and storage of the eligibility results file. Not only does this improve your productivity, it also reduces need to print the results as the data is stored in electronic format. pVerify can help you validate the following patient information:

- Eligibility Status
- Demographic info like name, DOB etc.
- Subscriber ID
- Co-pays & Co-Insurance
- Patient Address
- PCP Name (if applicable)
- Primary and Secondary Payers (for Medicare patients)
